Summary tabulations of vessels by gear, port, and tonnage	III
Active Fishing Vessels, 1945	1
Graph of average annual production of New England otter trawlers	43

1/ Compilation of an annual accurate boat list was begun by George A. Rounsefell, assisted by other members of the Division of Fishery Biology, for use of the North Atlantic staff. This list has been expanded and supplementary information added by the present authors to provide a more complete record of the North Atlantic fishing fleet and some of its principal characteristics.

INTRODUCTION

The list of active fishing vessels includes all craft known to be in operating condition as of January 1, 1945, plus vessels entering the fishery at Boston, Gloucester and New Bedford, Mass.,Portland, Me., and New York City during the first 11 months of 1945.

Only documented vessels of 5 net tons or over are included. About 3,000 small undertonnage vessels also engaged in commercial fishing in the New England area. These small vessels fish principally for lobsters. Their catch accounts for only a small proportion of the New England production and it is landed mostly at numerous small ports.

Vessels used exclusively in oyster cultivation are not included.

All vessels not designated as "Gas" or "Steam" driven are Diesel powered.

The "Chief Port" listed for each vessel is the port or area in which the vessel landed the greatest volume of fish in 1944.

The basic data on tonnage, length, and horsepower have been taken from "Merchant Vessels of the United States" but numerous corrections have been made, especially in horsepower, to correct errors and account for changes in the motors installed in the vessels.

KEY TO THE FISHING PORTS LISTED FOR EACH VESSEL

Key	Port
EME	Eastern Maine (Eastport, Lubec, Jonesport, etc.)
MTD	Mount Desert Island (Ports on the island and vicinity)
RKD	Rockland (Belfast to Boothbay Harbor)
POR	Portland and vicinity
NHA	New Hampshire
GLO	Gloucester
BOS	Boston
PLY	Plymouth (Including Scituate)
PTN	Provincetown (Including south to Chatham)
WHO	Woods Hole (Including east to Hyannis and Nantucket)
NBD	New Bedford
RIS	Rhode Island (Newport, Point Judith, etc.)
CON	Connecituct (Stonington, Mystic, Noank, etc.)
NYC	New York City
SOU	Long Island and south, landing occasionally in North Atlantic ports

Key to the fishing gear listed for each vessel and the principal species caught by each gear

Key	Gear	Principal species
*BC	Bait carrier	Scrap and bait fish
*CC	Clam carrier	Soft clams
CD	Crab dredge	Crabs
CL	Clam fishing	Soft clams
DGN	Drift gill net	Mackerel
HAR	Harpoon	Swordfish and tuna
**HC	Herring carrier	Herring
HL	Hand line	Cod and tilefish
LOB	Lobster pots	Lobsters
*LS	Lobster smack	Lobsters
LT	Line trawl	Cod, haddock, cusk, hake, tilefish, halibut
MUS	Mussel fishery	Mussels
OT	Otter trawl	Haddock, rosefish, cod, flounders, whiting
PS	Purse seine	Herring, mackerel, pollock, alewives
QD	Quahaug dredge	Hard clams
SHR	Shrimp trawl	Shrimp
SD	Scallop dredge	Sea scallops
SGN	Sink gill net	Pollock, cod, haddock
SS	Stop seine	Herring
*TRP	Trap fishery	Whiting, mackerel, scup

*Necessary for transporting fish, but do not actually catch the fish.

**Includes both fishing boats and transporters.

1/ Otter trawl was considered the principal gear when it caught more than half of the vessel's fish; the secondary gear otherwise.

2/ 507 of the vessels used otter trawl gear exclusively.

Note: 45 of these vessels are expected to be otter trawlers, 3 vessels at Gloucester, purse seiners, and 2 at New Bedford scallop draggers. No information is available on the other 14.

1/ Including new vessels, conversions, and vessels returned by the United States Government. Revised according to information received up to June 30, 1945.

2/ Includes only documented vessels 5 tons and over.

NOTE: The above graph is based on the 1942 and 1943 landings of all vessels fishing regularly out of Boston, Gloucester, New Bedford, and Portland.

The curves represent the total production of vessels engaged in the principal fisheries as indicated.

Only vessels which landed fish during 9 months or more of the year were included and the data were adjusted for any abnormal interruptions in production.

The graph has been made in terms of logarithms to present the data more accurately for the smaller vessels.
